## Shelf Loading

Column loading is the vertical load, measured in pounds, that can be applied on any upright. Each upright bears one half of the load of each shelf load that it supports.

### Column Load on Center Upright

- 500 lbs plus 500 lbs = 1000 lbs
- Column Load on Center Upright

### Maximum column load capacity

- **Note!** Maximum column load capacity is 4500 lbs. DO NOT EXCEED!

---

**NOTES!**

- All capacities are for evenly distributed load.
- Capacities are reduced by 35% when only the front half of the shelf is loaded.
- Capacities listed are for shelves installed in Madix Maxi Line shelving system only.
- Load capacity for 2' (610 mm) wide shelves in depths 06" to 30" (152 mm to 762 mm) is 50% of 4' (1219 mm) wide shelves.
Offset Loading
Offset loading is measured in inch-pounds and represents the bending load at the connection of the base shoe and the upright. To determine if you exceed the load limit of the fixture, take the difference between the larger inch-pound calculations on one side of the fixture and the inch-pound calculations on the other. This difference cannot exceed 15,000 inch-pounds. For wall sections, the calculation for the one side cannot exceed 15,000 inch-pounds.

Front Loaded Shelves
Important: Front-loaded shelves are the most common to exceed fixture-loading capacities. Compare the increases in inch-pounds of front-loaded shelves over evenly loaded shelves, particularly on wall sections!

**Anchoring**

**SFA-RD Anchors**
- Beginning at each end of a Maxi Line Gondola or Wall Fixture run, Base Shoe Anchor Brackets are installed at alternate Base Shoes.
- All runs with an odd number of Uprights will be anchored at alternate Base Shoes.
- All runs with an even number of Uprights will be anchored at alternate Base Shoes, with remaining single section at, or adjacent to, the middle of the run, as indicated by the shaded area in examples below.
- Two expansion bolts per anchor.

For Floor Anchors and Expansion Bolts, see SFA-(TYPE)-25 and SFA-EB(PACK) in the catalog index.
Preventing Fixture Overturning

- To preclude overturning, the height of the upright cannot exceed the leveler spacing dimensions multiplied by six.
- If uprights exceed the heights shown, they must be secured at the top, or one of the following corrections must be made:
  - **Gondola:** Base Shoe Levelers must be anchored to the floor as shown below.
  - **Wall:** Base Shoe Levelers and Standard Upright Levelers must be anchored to the floor as shown below.

Vertical Dividers
Separate lumber, doors, shutters, molding, lawn furniture, or similar merchandise with divider arms or M dividers. Choose from ¾” (10 mm) diameter regular-duty or 1” (25 mm) square heavy-duty arms. Merchandising capabilities are practically endless with our wide selection of arm lengths and Vertical Divider standoffs.

Vertical Divider Bar
- 1” (25 mm x 25 mm) square tubing has .40” (10 mm) diameter holes 1” (25 mm) OC to accept upright, rolled merchandise
- Includes heavy-duty bracket to attach to basic fixture upright
- One crossbar required per section
- Load capacity is 100 lbs

Threaded Vertical Divider Arms
- Unique mounting attachment allows straight-out or 45° (either direction) mounting to Vertical Divider Bar [VDB-(NW)02]
- Arms may be mounted to front and/or rear of standoff bars
- Regular-duty divider arms ¾” (10 mm) diameter with red neoprene safety tip
- Heavy-duty arms 1” (25 mm) square tubing with vinyl safety cap
- Threaded option locks arm and prevents accidental dismounting
- Standard finishes: Sahara or Blue Gray

M Vertical Divider Arms
- Same mounting pin system as divider arms for installation into VDB[VDB-(NW)(ND)], providing greater side-to-side load resistance than divider arms
- M Vertical Divider Arms are designed so the top of the divider is 4” (102 mm) deeper that the bottom divider, so that product leans back (see illustration): Ex: MVDA-1848R
- Light-duty divider is a ¾” (10 mm) diameter steel rod; heavy-duty divider is ¾” (19 mm) diameter steel tubing
- Vertical Divider Bar [VDB-(NW)(ND)] at bottom needs to be 4” (102 mm) deeper than the top Vertical Divider Bar (ordered separately)

**NOTE!** Overall depth based on the top of the divider

Maxi Line Rolling Frame

Clean, organized displays attract more customers, but stocking enough merchandise to meet demand is important, too. Give your customers plenty of selection while maintaining an attractive appearance with the Maxi Line Rolling Frame. This system enables retailers to display samples in front of stocked merchandise without sacrificing valuable selling space. Spring cushions provide greater stability and smoother motion, so displayed items remain in place as the panels slide back and forth along the track. The panel frames can also support pegboard, creating cross-selling opportunities for small, hanging merchandise.

- Space-efficient Maxi Line units
- Allows for more floor space
- Available in 3’ or 4’ (914 mm or 1219 mm) lengths
- Inside shelf space 8” to 14” (203 mm to 356 mm)

MIPS – Maxi Integrated Pallet System
The Maxi Line Integrated Pallet System (MIPS) displays palletized merchandise within conventional shelving sections, enabling retailers to expand their merchandising options within a shopping aisle and reduce restocking labor. Madix estimates that MIPS can cut at least ten hours an aisle per week of restocking, and it also precludes employee injuries from lifting heavy boxes/merchandise.

The MIPS is particularly well suited to high-density merchandise that must be repeatedly restocked. The system is comprised of components that may be specified in new stores or retrofitted to existing Maxi Shelving. This flexibility permits stores to convert areas back to conventional displays as merchandise needs to change.

- Utilizes conventional Maxi Line parts and accessories, including standard shelves, in depths that optimize merchandise presentation
- Product can be added to existing shelving by removing Base Shelf, Kickplates and Base End Covers; this process can also be reversed to convert back to conventional shelving
- For applications that require additional load capacity, Hypermaxi can be installed
- No change in load capacity when installed per instructions

NOTE!
A 4' (1219 mm) section requires a pallet that does not exceed 44" (1118 mm) wide

Hypermaxi System

Hypermaxi is a sub-system of modified Wide Span shelving. This product increases the versatility of basic Maxi Line components by adding stock storage above the fixture to optimize space usage.

Hypermaxi may be used throughout the store or specifically applied to categories as small as 3’ (914 mm). Choose Upper Decks plus optional Intermediate Decks (as opposed to Standard Base and Upper Shelves), depending on the type of merchandise involved.

How To Order

Order basic shelving run from Maxi Line catalog.

Then +

Hypermaxi Over Gondola
A simple and economical way to achieve overhead reserve stock. Hypermaxi uprights and alternate Basic Uprights are equal in height. Height of intermediate Basic Uprights and all backs should be at least 12" shorter than the Hypermaxi uprights. All components are from the standard catalog, except decks and deck supports, shown on the next two pages. Order metal extension upright end covers for the higher Basic Uprights.

Instructions for ordering NEW Hypermaxi Over Gondola Runs (HMOG)
Do not order 12" (305 mm) extension upright. Order every other upright 12" (305 mm) taller than the middle upright and order the backs to the height of the shorter middle upright.

NOTE!
DO NOT exceed capacity stamped on the beams with correct amount of deck supports correctly installed.
The weight capacity stamped on the beams, is only for the beams and not the system.
Increasing the vertical space between beams or support arms will increase the chance of Hypermaxi column buckling, resulting in a diminished load capacity.
Due to variations in installation and merchandising, system capacities cannot be predetermined.
Contact you Madix Sales Representative to obtain installation specific information.

Cantilever Storage System
The Cantilever Storage System is constructed with Maxi Line components for a unique appearance. A choice of one or two deck levels are available (with wood or wire grid decks). Light Canopies are also an attractive option available for Cantilever Systems and can attach directly to the Cantilever Arms.

In order to use the system properly and safely, please follow the instructions below.
1. Whenever the system is installed, it must always be with these parts (NO EXCEPTIONS):
   a. Double Welded Uprights
   b. Double Stacked Shoes
2. The Cantilever Arms may not be deeper than the Base Shelves.
3. Load capacities are listed in the diagrams below.
4. Cantilever Arms may not be used higher than 144” (3658 mm).
5. Custom alternatives to the applications listed below require extensive testing before approval; client must be fully apprised of system’s use and limitations before Madix approve the use of Cantilever Arms in a non-standard application.

All examples below are for 8’ (2438 mm) sections, divide by 2 for 4’ (1219 mm)

Wall or gondola runs with a single Cantilever
Load capacity 1600 lbs

Wall runs with two Cantilever levels
Cannot exceed 1600 lbs on any single 8’ level, and may not exceed 2000 lbs

Gondola runs with two Cantilever levels
Load capacity per level 1600 lbs
Load capacity per side 3200 lbs

NOTE!
HAND STACK ONLY!
Powered fork trucks on stackers are not recommended for use on Cantilever Storage System.

Maxi Slice

Maxi Slice's upright system provides interesting merchandising opportunities by breaking up a common gondola into flexible sections. Give merchandise more 'pop' and cross-sell products by adding shelves and accessories in smaller categories.

Slice gives merchandise the opportunity to have shelves planogrammed to what is needed rather than being restricted to 3' and 4' (914 mm and 1219 mm) sections.

- Can be used on one or both sides of a gondola
- Can be installed in existing Madix Maxi Line shelving
- Backs are available in pegboard, hardboard, and BWGH wire backs
  (Can not be used with slatwall backs)

**NOTE!**
If you order a BWGH Wire Back and a back on the other side, the back could be painted on two sides.

### Ordering Information

**Order standard gondolas, but follow these guidelines:**

- Order gondola with 3' and 4' (914 mm and 1219 mm) Base Shelves and Kickplates
- Delete Top Spanners
- Delete Center Spanners
- Delete Splicer Spanners (replace with MBS(NW) as needed)
- Delete Backs on Maxi Slice side
- Maxi Slice Upright: Order the height based on gondola height
- Maxi Slice Upright Tie Bar: Two required 48"H to 60"H (1219 mm to 1524 mm), and three required 66"H to 96"H (1676 mm to 2438 mm)

Create a perfectly stocked shelf instantly with @Front! @Front incorporates multiple small, rolling tracks that work with gravity to automatically feed cooler merchandise to front of shelf, cutting time and labor necessary for store merchandising and facing. Dividers can be easily adjusted in mere seconds, accommodating bottled, canned, and boxed goods of varying size and shape. Rolling-track system is fully integrated with the shelf itself, little to no maintenance required. Simply remove the entire shelf for a thorough wash, or wipe the rollers with a damp cloth to remove light dust and debris. Unique, patented design uses all plastic construction, allowing roller replacement from top surface (spare rollers integrated into bottom of every shelf). 5° downtilt improves sight lines for better visual impact than other gravity feed systems. Replaces cumbersome, spring pusher systems.

- @Front Roller Shelf System for Hussmann and HillPhoenix Coolers
- @Front is the only NSF listed roller system due to patented design
- @Front feature: Landing zone to reduce/eliminate roller damage from dropped merchandise
- @Front snap-in design for replacement rollers; each roller mat includes a package of replacement rollers, attached to the underside of mat
- @Front design has drain for fluid; fluid collects and rollers become inoperative
- Easy to clean: remove mat and pressure wash due to all plastic construction
- Kits are packed two per carton: two shelf frames, two roller mats and two shelves of accessories

Acceptance
All orders, contracts, and agreements are subject to Madix’s acceptance and approval. Madix shall not be liable for any delay in the performance of any order, contract, in the delivery of any goods, or for any damages resulting from such delay, when such delay is directly or indirectly caused by or due to fire, flood, accident, riot, act of God, war, governmental decree or order, strike, labor difficulties, shortage of labor, fuel, power, material or supplies, transportation delay or any other delay or causes (whether or not similar to any of those herein before specified) beyond our reasonable control. Order acceptance will be per the conditions and terms outlined in Madix’s acknowledgement. Mailing of the acknowledgement will signify Madix’s acceptance of the order.

Any manufacturing or engineering costs incurred will be charged to the customer. Orders produced and delayed for more than one week may incur charges for demurrage, unloading, or other storage costs. Madix will advise customers of the estimated charges at the time changes or cancellations are made

Shipments
Method and route of shipment are at Madix’s discretion unless Madix is furnished with complete shipping instructions at least ten (10) days before the scheduled shipping date. Freight is FOB/EXW Madix shipping point.

Freight Claims
For common carrier shipments, claims must be made directly with the carrier by the recipient. Listed are the types of losses which may occur, and your responsibility in handling them:

Loss of Freight: It is the receiver’s responsibility to count the freight at the time of delivery. Any exception must be noted on the carrier’s delivery receipt at time of delivery.

Damage of Freight: As with a loss of freight, damage of freight must be noted on the carrier’s delivery receipt at the time of delivery. It is the receiver’s responsibility to make sure that the freight is inspected for visible damage and that the number of pieces damaged is marked on the carrier’s delivery receipt. Failure to note visible damage at the time of delivery will result in non-payment of a damage freight claim. Salvage must be held for the carrier.

Concealed Damage: If goods are received in apparently good condition but there is concealed damage, it is the customer’s responsibility to contact your Madix Service Representative within 15 calendar days from delivery. Customer must keep the product and the packaging so that an inspection may be conducted by the carrier. Failure to handle a concealed damage claim in this manner could greatly reduce the amount recovered from the carrier.

Returned Goods
Returned Goods requests must be submitted to Madix, Inc. within 60 days after receipt of product. Authorization must be in writing on Madix’s RGA (Return Goods Authorization) form. Goods must be received within 30 days of RGA issue date for credit. Customer is responsible for delivery of authorized returns to Madix designated location in condition originally received. Only Code A products finished in returnable colors as indicated on the finish policy pages will be considered for return, and only items in unused, in resalable condition, and in the original packaging. No special size, color, or specially manufactured parts or products are eligible for return unless sent to the customer as the result of an error by Madix. Only merchandise listed on the RGA will be accepted for conditional return. Credit will not be issued for that portion of merchandise that is not considered resalable. A handling and restocking charge of 25% of the invoice price will be charged for all approved returns. Submit requests to your Madix Sales Representative or Customer Service Department prior to returning any merchandise. All returns must be have the customer name and Madix RGA number prominently displayed on each package. Product to be shipped prepaid at customer’s expense unless prior approval has been received from an authorized Madix Representative.

Warranty
We warrant to the original purchaser that all products manufactured by Madix are free from defects in material and workmanship. This warranty is invalid if products or parts are modified or used in a manner other than the intended purpose. Our obligation under this warranty is limited to repairing or replacing of any part or parts which shall, within one (1) year after delivery to the original purchaser, be demonstrated to be defective under normal use and service. This warranty is in lieu of all other warranties, expressed or implied, and of all other obligations or liabilities of any kind on Madix’s part, and no modification of this warranty shall be valid or binding unless in writing and signed by an officer of Madix, Inc.
Production

Madix fixtures are manufactured utilizing the most current technology of highly automated systems with process control techniques. Skilled craftsmanship, combined with automatic presses, roll forming machines, multi-spot welders, conveyers, finishing equipment and thorough inspections produce store fixtures of the highest quality.

Upright

Carefully engineered of heavy gauge, high quality steel components, the UPRIGHT is slotted one inch on center for maximum flexibility, shelf adjustability and use of available space. Standard heights range from 36” through 96” with built-in leveler. For the finishing touch at the end of the shelving run, the snap-on UPRIGHT END COVER is made of durable, scuff and impact resistant plastic or heavy gauge metal. The UPRIGHT CAP, made of high impact plastic, has provision for a sign holder.

Base Shoe

The five inch low BASE SHOE features exclusive “I” beam design, engineered of projection welded high strength steel parts insuring maximum load capacity. Snaps securely into upright with leveler and electrical access allowing for quick error free installation. For the finished look, the one piece slip on BASE END COVER is made with a high impact plastic nose reinforcement to protect base shelf tag molding.

Spanners

Snap-in support SPANNERS keep uprights at equal spacing and hold the back panels rigid. Each spanner has knockouts for electrical access and telescoping uprights.

Back Panels

High density hardboard BACKS fit flush to the face of the upright. A wide variety of finishes include solid, pegboard, wood grain and fabric in a wide assortment of optional colors. Mirrors and open backs are also available.

Kickplate

Fully floating feature of kickplate allows flush fit against uneven floors, snaps in and out without disturbing base shelf for easy cleaning. Convenient knockout accommodates electrical access.

Base and Upper Shelves

Steel base shelves feature lock tabs to insure quick installation and precision alignment. A double row of 1/4” inch perforations on the front and rear edge makes any form for binning possible. Slim bracket, high tensile design with flat or 15 degree downslope upper shelf positions allow for maximum merchandise visibility. Integrally formed price tag molding accommodates 11/4” tag. Upper shelves available in 8”, 10”, 12”, 14”, 16”, 20”, 22”, 24”, 26”, 28”, and 30” depths. Base shelves available in 12”, 14”, 16”, 18”, 20”, 22” 24”, 26”, 28”, and 30” depths.

Shelf Loading

The recommended load capacity for upper shelves is based on evenly distributed weight. Capacities are reduced by 35% when front half is loaded and reflect rated maximum load. Load capacities are shown in the General Information Section under Shelf Loading.

Baked Enamel, Powder Coat Finishes

All metal parts are finished with a specially formulated high solids or powder which are electrostatically bonded in a unique multi-stage process, to insure the highest quality finish. Aerosol cans of Touch-up paint are available in Madix’s standard and optional colors. FAA regulations prohibit the shipment of this product by air or in export containers by air or ocean to countries outside the United States.

Product Maintenance

When necessary to clean Madix shelving, use a non-abrasive mild detergent and warm water, followed by thorough drying. The use of a cloth made of a soft white cotton material is strongly recommended. The use of cleaning products that contain abrasive, bleach, or strong solvents, such as ketones, ethers, etc. will result in damage to the finish. The damage is most severe when these harsh cleaning agents are used on colors which contain leafing aluminum pigment such as powder chrome, silver vein, and other “vein” type finishes. The aluminum in these coatings resides at the surface of the finish and is therefore susceptible to damage by the harsh cleaning agents. As an alternative to the mild detergent, cleaners with ingredients similar to those found in products such as 409, Fantastik, and Simple Green can be used. Caution! Cleaners having ingredients similar to those found in Ajax, Borax, Comet, etc. should be avoided as finish damage could result.
Codes
In your planning stage, consult with local municipal engineers to determine what codes and restrictions will be applicable in the locations where the shelving will be used. Codes may include: state, local, fire, building, and health and safety codes. Seismic requirements may apply in some locations. For example, in most locations fire codes state that fixtures need to be at least 18 inches below the sprinklers.

Shelving Selection
Take into consideration the load that is expected not only on each shelf but also on the unit as a whole. Take into account the upright capacity. Refer to the load capacity information that is in the Madix Standard Catalog. Madix shelves are rated using an evenly distributed load. Do not install shelves or accessories that extend beyond the depth of the Base Shelves. Consider making the Base Shelves and low height fixtures a contrasting color from the floor's color to prevent potential tripping hazards. Do not use Madix parts or accessories for any purpose other than originally intended by Madix.

Shelving Installation
Initial installation or relocation of Madix shelving should be supervised by qualified personnel. Madix products should be installed according to Madix's specifications. Madix's installation sequence must be followed for assembly and leveling. An improperly installed store fixture has a poor appearance and may cause a dangerous condition. Be especially careful when leveling fixtures with offset loads in which one side of the fixture has a considerably heavier load than the other side. Dismantling and reassembling used Madix shelving can be dangerous if the installers who are doing the work leave out parts, use damaged parts, or do not reassemble the product by Madix's specifications. Do not alter, modify, or structurally change any shelving component. Do not move assembled shelving. Only parts and accessories that are produced and supplied by Madix are covered by the Madix warranty. Do not assemble Madix fixtures with parts from other manufacturers. Under no circumstances should you use damaged parts. When assembling Gondola/Wall Shelving, install Kickplates to protect the Base Shoes from floor cleaning equipment and to offset the possible bumping and misalignment of the shelving runs. Do not install shelves or accessories on the sides of wall sections or any section that is not supported by Base Shoes. Use caution when handling and transporting shelving parts. Be careful when cutting shrink wrap from pallets because the shelving parts can dislodge from the wrap and fall. Cut the wrap gradually from the top, only as much as you need to remove the product from the top. Two common hazards while installing store fixtures are: employees hurting themselves with improper types of box cutters and employees putting boxes on the floor and then tripping over them.

Anchoring and Floors
Depending on code requirements and Madix's specifications, some products must be anchored to the walls and/or floors. Do not lean tall or heavy objects against unanchored shelving systems. Retailers must consider the type of floor upon which the shelving will be installed.

Impact Loading
Impact during the loading and unloading of merchandise can create an adverse loading situation and may result in damage to or failure of the Madix shelving. Do not walk or climb on Madix shelving.

Overturning
Overloading the top portion of the shelving, non-uniform loading, out-of-plumb installation, and impact can cause shelving to overturn. Improperly installed Madix shelving with offset loads can cause store fixtures to collapse. Carefully follow Madix's installation instructions in order to prevent shelving from overturning.

Additional Shelving Safety Pointers
Product loading instructions are included with each Madix order. Retailers must make merchandisers aware of the product's load limitations and the dangers of overloading the shelving. Remove any merchandise or overstock before attempting to move Madix shelving. Periodically inspect your Madix shelving for damaged or loose parts. Make sure that shelves and accessories are properly seated in the slotted or perforations. Make sure that shelves and accessories are not overloaded. As merchandising changes, beware of creating offset loads on shelving runs that are not properly leveled. Look for leveling warning signs such as increased gaps between shelves or accessories that may indicate that the shelving runs need re-leveling. Damage to Madix shelving is dangerous. In some cases, the shelving should be unloaded immediately and repaired or replaced before returning to service. Re-level fixtures that you have bumped or moved. Incorporate safety into your merchandising strategy. When possible, merchandise the heavier products on the lower shelves. If the merchandise will not fit on the Madix shelves and there is a replenishment cycle, make sure that the cycle is a safe one. Make sure that merchandise and overstock are properly stacked and maintained so that items will not fall into the aisles. Assure that customers who handle merchandise or overstock will not push product from one side of the Madix fixture to the other side where people could be injured from falling merchandise. Safely secure overstock that is placed on Madix shelves overhead. Measure the difficulty that your employees have in retrieving overstock, and consider whether employees or customers could be injured if the product happens to fall from the shelving units. Teach employees and inform customers that Madix shelves should never be used as ladders to reach higher shelves. Ladders should be clearly marked for employees use only and should not be left unattended, or customers will try to remove stock on higher shelves by themselves. Notify customers to ask for assistance when they need product that is out of their reach.

Finish Policy for Wood Products

High Pressure Laminate
The terms “laminate” or “HPL” are commonly applied to this material which consists of multiple layers of paper infused with phenolic resin and topped by a finish paper coated with clear melamine resin, all totally bonded under high pressure and heat. The finished sheet has extremely high wear and impact resistance.

Customer Specified High Pressure Laminate
Madix coding is based on Wilsonart availability. Laminates other than Wilsonart may require additional lead time.
- Customer specified laminates add $100.00 per pattern, per order
- Additional charge will apply based on the laminate grade that is chosen
Laminates that are not from a laminate manufacturer’s standard samples (metallics, heavy textures, wet looks, core edge, special prints) will require a special quote. Contact Customer Service for specific pricing on laminates not listed above.

Thermofused Panels
Thermofused panels are ideal for non-wear surfaces and have substantial impact and wear characteristics compared to melamine panels previously available. The product is produced using hot press laminating polyester or melamine resin impregnated self-bonding paper to wood substrate. Performance specifications are available from the American Laminations Association. Madix does not recommend the use of Thermofused panels on horizontal or other wear surfaces.

Printed Mirror Hardboard
Printed materials are primarily used for back panels, but appear as various other products. These materials are carefully cross matched to the corresponding laminates and Thermofused. Mylar mirror hardboard is used in the same applications and is also available in pegboard and grooved pegboard.

Pricing For Levels II To IV

Level II
1.2 x the difference between the Hardboard/Pegboard Optional Color pricing and the Hardboard/Pegboard Sahara pricing.

Example: Optional upcharge for a BH-342 with a Level II finish would be calculated as follows:
$13.85 - $12.45 = $1.40 x 1.2 = $1.68. The color upcharge for a BH-342 with a Level II finish is $1.68. This upcharge amount will be added to the Optional Color price of a BH-342. The new price of a BH-342 using a Level II finish is $15.53 ($13.85 + $1.68 = $15.53).

Level III
1.4 x the difference between the Hardboard/Pegboard Optional Color pricing and the Hardboard/Pegboard Sahara pricing.

Example: Optional upcharge for a BH-342 with a Level III finish would be calculated as follows:
$13.85 - $12.45 = $1.40 x 1.4 = $1.96. The new color upcharge for a BH-342 with a Level III finish is $1.96. This upcharge amount will be added to the Optional Color price of a BH-342. The new price of a BH-342 using a Level III finish is $15.81 ($13.85 + $1.96 = $15.81).

Level IV
1.8 x the difference between the Hardboard/Pegboard Optional Color pricing and the Hardboard/Pegboard Sahara pricing.

Example: Optional upcharge for a BH-342 with a Level IV finish would be calculated as follows:
$13.85 - $12.45 = $1.40 x 1.8 = $2.52. The color upcharge for a BH-342 with a Level IV finish is $2.52. This upcharge amount will be added to the Optional Color price of a BH-342. The new price of a BH-342 using a Level IV finish is $16.37 ($13.85 + $2.52 = $16.37).
